

- In light of the recent concerns with the COVID19 Corona Virus, everyone wants to know how best to clean their MFP screens and operation panels.

- Avoid anything that contains:
 - Bleach
 - Ammonia
 - Other harsh cleaning solvents

- The touch screen could eventually become clouded and require replacement

What Can I Use?

- Most types of anti-bacterial wipes or sprays

- Lightly moisten a cloth and gently wipe down the screen and panels
 - A lint-free microfiber cloth is recommended
 - Avoid paper towels as they may scratch
- DO NOT spray directly on the device's surfaces or components, as getting liquid inside the device could damage the internal components

RECOMMENDED ITEMS TO USE

- Lint-free or microfiber cloths
- Ethanol or isopropyl alcohol of at least 70% concentration
- Glass cleaner on the device's platen glass
- Disposable gloves

CLEANING TIPS

- Refrain from spraying product directly on equipment.
- Apply the alcohol onto a lint-free or microfiber cloth and then wipe the noted surfaces of the device.
